T-3'), double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacta), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT/T3 vector (Pharmacta). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from sporadic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National Institute of Diabetes and Digestive and Kidney Diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1. 329

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from a pool of 5,000 rolons made from the same library (cloneIDs 1414920-1417991 and 1520904-1522439). Subtraction by Bento

                                                                                                                                                                                                                                                                                  TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Alaborate—"Dutob"

Anote—"Organ: pooled; Vector: pT713D-Pac (Pharmacia) with a modified polylinker; Site_1: Not 1; Site_2: Eco RI; Equal amounts of plasmid DNA from five normalized
libraries were mixed, and ss circles were made in vitro.
Ibraries were mixed, and ss circles were made in vitro.
Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 5 libraries The pools consisted of the following libraries and clonelDs: Scares NBSRP pool 1: 309384-310919, 33208-325895 Scares NBSRP pool 1: 145032-14735, 147720-148103, 148872-149255, 15002 - 150407, 151176-15237 Scares NBPRR-9W pool 1: 304776-30631, 772104-774407 Scares NBHPA pool 1: 7321204-774407 Scares NBHPA pool 1: 732120-726407, 739080-740999 Subtraction by Bento Scares and M. Fatima Bonaldo." 1 others

WARNING: There is evidence that suggests that the 384-well parent plate of this clone contains both human and mouse derived clones.

Thus, the origin of this clone is uncertain. This caution should be kept in mind should you use this clone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cDNA Library Arrayed by: Greg Lennon, Ph.D.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of the normal human PKDI gene from The present sequence is that of the normal human PKDI gene from The present sequence is that of the normal human pKDI gene from The present sequence is that of sequence (a. transversions, deletions and/or insertions) are associated with a transversions, deletions and/or insertions is generally of the presence of the presence with a previously reported partial conversable). The most significant difference is the presence of two additional cytosine residues on the plus-strand at position 4566 of the previously reported sequence. The insertion results in a frame-shift in the predicted protein coding sequence, calling to replacement of 92 C-terminal amino acids with a novel calling acid C-terminus. The PKDI gene contains 23 Alu repeats. The prepart and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp repeat and two large CT-terminal mopies of a perfect 27 bp and 250 mopies of a perfect 27 bp and 250 mopies of 250 mopi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-JUN-1998 (first entry)
Human FDL locus between chromosomal markers ATPL (ATP6C) and D16S84.

Human polycystic kidney disease gene, PKD1 - useful to treat and diagnose human autosomal or adult onset polycystic kidney disease.

Example 5; Pages 60-89; 257pp; English.

The present sequence is the human polycystic kidney disease 1 (PKD1) locus between chromosomal markers ATPL (ATP6C) and D16S84.

The PKD1 gene or polypeptide may be used to treat autosomal cominant polycystic kidney disease (APKD), and identify carriers of mutant PKD1 genes, i.e. subjects susceptible to APKD. Antibodies (Ab) that distinguish between normal and mutant PKD1 sequences can also be used in diagnostic tests. Anti-PKD1 Ab may also be used to perform subcellular and histochemical localisation studies, and to block the function of PKD1. Ab are also useful in rational drug design studies to identify and test inhibitors of PKD1. Sense and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure, Fig 3; 34pp; English.

The 1.5 kbp region from the EcoRI to the PstI site shows the region of homology in the human erbB-3 gene. The region contains 3 ORFs. See Q12224 for full erbB-3 gene. 333 C; 387 G; 359 T;

New DNA sequence -
encoding signal peptide and mature protein of human lysozyme
Figura 2-1 - 2-1; pages 12-13; 13pp; Japanes.

Tit is useful for effective expression of human lysozyme in yeast or
animal cells. Also, DNA encoding various proteins can be linked to the
3' end of the HL signal peptide, so that it is downstream of the
promoter of the expression vector. Expression of such proteins is
promoter of the expression vector. Expression of such proteins is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human lysozyme gene -
useful promoter for genetic expression of animal culturing cell
useful promoter for genetic expression of animal culturing cell
i. Fig 4-1 to 4-3 Pages 834-835; 13pp; Japanese.
Human lysozyme DNA can be used to obtain transgenic animals, e.g. mice.
It can also be produced by culturing animal cells, and it can
promote the genetic expression of these animal cells.

Faure, M., Franke, J., Hall, A.L., Podgorski, G.J. and Kessin, R.H.
The cyclic nucleotide phosphodiesterase gene of Dictyostellum
discoldeum contains three promoters specific for growth,
aggregation, and late development
Mol. Cell. Biol. 10 (5), 1921-1930 (1990)

/note=*Organ: liver; vector: pME185-FL3; Site_1: DraIII (CACTGTGTG); site_2: DraIII (CACCATGTG); lst strand cDNA was primed with an oligo(dT) primer |

[AIGTGGCCTTTTTTTTTTTTTTTT]; double-stranded cDNA was ligated to a DraIII adaptor [TGTTGGCCTACTGG], digested and cloned into distinct DraIII sites of the pME185-FL3 vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should be used to isolate the cDNA insert. Size selection was performed to exclude fragments <1.5kb. Library constructed by Dr. Sund. Sugano (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCG and 3' end

Claim 12; Fig 19: 55pp; English.
This sequence represents a human transaldolase (TAL-H) retrotrnspoable element TARE 6. The TAL-H protein can be used in methods to raise antibodies for detecting human transaldolase-mediated neurodegenerative autoimmune diseases, especially multiple sclerosis. The protein has autoimmune diseases, especially multiple sclerosis. The protein has
                                                                       Human polycystic Kidney disease gene, PKD1 - useful to treat and diagnose human autosomal or adult onset polycystic Kidney disease I semple 5; Pages 60-89; 257pp; English.

C The present sequence is the human polycystic kidney disease I The present sequence is the human polycystic kidney disease I (PKD1) locus between chromosomal markers ATPL (ATP6C) and D16S84.

C The PKD1 gene or polypeptide may be used to treat autosomal dominant polycystic kidney disease (AFKD), and identify carriers of mutant PKD1 genes, i.e. subjects susceptible to APKD. Antibodies of mutant PKD1 genes, i.e. subjects susceptible to APKD. Antibodies of ABC be used in diagnostic tests. Anti-PKD1 Ab may also be used to perform subcellular and histochemical localisation studies, and to block the function of PKD1. An are also useful in rational drug design studies to identify and test inhibitors of PKD1. Sense and to antisense sequences derived from the PKD1 gene may used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-MX-1999 (first entry)
